

How Decals/Stickers Are Made

1. Design

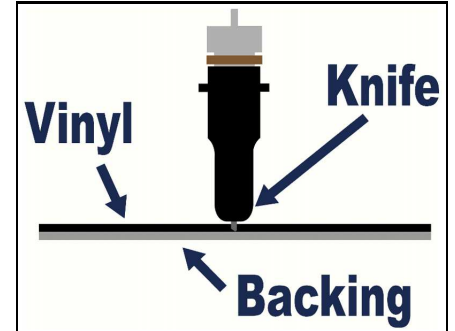

First, your design needs to be created. This should be saved in a vector format.

2. Loading Vinyl

Then, the correct vinyl color(s) are selected and loaded into the vinyl cutter.

3. Cutting

The software then sends the file to the cutter. The knife blade cuts through the vinyl but not its backing.

4. Weeding the Decal

The photo shows cut lines and outer vinyl being removed.

The vinyl for the center of letters are picked out using tweezers or X-acto™ knives.

The photo shows a completely weeded decal.

5. Masking

Masking or application tape is then applied over the weeded decal. This keeps the decal in the correct position while installing.

6. Trimming

The extra masking and backing are then trimmed off, leaving the completed decal.
